REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:
2. Regarding Claim 1, US Patent 6,044,120 to Bar-David et al. discloses a radio receiver (Fig. 1) that receives first and second signal components using first and second antennas (18), processes the signals (20) and combines the processed signals (24) in a linear combination using complex weights (i.e., coefficients) ($W_i(k)$, $W_m(k)$) (column 3, lines 34-36) and selects the weights (i.e., complex values for coefficients) in weight generation circuitry (22) based on the individual received signals and the output signal (column 3, lines 20-25) in such a way as to improve signal quality. However, Bar-David discloses determining the weights using a minimization solution applied to a mean squared error (column 7, lines 38-45) and, as such fails to disclose selecting coefficients so that the output signal quality is at least equal to the quality of the best quality input signal, as claimed. US Patent 6,577,686 to Koga et al. discloses a similar arrangement (Fig. 1) that calculates weights using an LMS algorithm (column 4, lines 45-64) also failing to disclose selecting coefficients so that the output signal quality is at least equal to the quality of the best quality input signal, as claimed. Because the prior art does not disclose or suggest all elements of the claimed invention, Claim 1 is allowable.
3. Claims 2 through 14 and 31 are allowable due to dependence from Claim 1.
4. Claim 15 is essentially similar to Claim 1 and is allowable for the same reasons.
5. Claims 16 through 30 and 32 are allowable due to dependence from Claim 15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
